

IRRIGATION CONTROL INTERFACE (ICI)

The ICI is an addition to a standard irrigation controller.

The device offers wireless control of 12 or 64 zones (depending on the model) plus an additional pump start unit.

The ICI's inputs are simply connected to the outputs of the irrigation controller. The ICI monitor the signal levels and use radio signaling to communicate changes to the Gulf Agri RX units and PCU units in the field. After receiving the signal, the units open or close the relevant solenoid valve or start the relevant pump according to the signal received.

CONTROL UP TO 128 INDIVIDUAL ZONES,
DEPENDING ON CONFIGURATION

DIGITALLY ENCODED SIGNAL

COMPATIBLE WITH MOST IRRIGATION
CONTROLLERS

12VDC OR 24VAC COMPATIBLE
