

Gulf Irrigation Controller

RICO 48

The Gulf Irrigation Controller is a wireless controller, allowing control of 48 zones.

It is a powerful yet easy device to use with downloadable software onto your desktop. After the downloading and installation of the RICO48 scheduling software, schedules can be set and downloaded onto the Rico's memory, which will allow the unit to run completely in standalone mode without being connected to a PC.

While the unit remains connected to the PC, the operator can receive updated information such as current irrigation programs running, scheduling time left, zones in operation and much more.

The Rico acts as the base transmitter unit and must be used in conjunction with Gulf Valve Control Units for a complete wireless irrigation solution.

FEATURES:

Control up to 48 individual wireless zones

10x Programs

10x Pumps

12x Starting Times

12VDC Powered

Reliable AM Signal, not effected by line of sight

PC Software, 12VDC Power supply, 1/4 wave antenna included.
